Door automation

FOR YOUR SAFETY

LiftMaster®

LiftMaster is a brand by the American Chamberlain Group, Inc., that was established in the early 1960s. Millions of installed operators and years of experience stand for the best quality and reliability.

We use the remote control at least several times a day. We keep it in our pocket, with our keys, at hand... That is why its quality is so important. With all this in mind, LiftMaster remote controls combine all key features:

Safety

To protect your door opener from being hacked, we apply rolling codes, that select a new code each time the system is activated.

Durability and elegance

High quality materials ensure reliability for years. Convenient shape with the possibility to attach keys makes it extremely practical.

Operating range

Many wireless operators utilize 433 MHz band, that can lead to disturbance of communication between different products. Our remote controls use 868 MHz, therefore their operating range is significantly larger.

MyQ® system is a revolutionary technology dedicated to automated garage doors, allowing you to monitor and control the door from a smartphone, tablet or computer

Integrated LED lighting is a modern and economical solution, which illuminates the garage when the door starts to operate. Lighting delay can be set for up to 2.5 minutes.

Rigid and stable steel rail with a durable belt ensures silent operation of the drive

High opening speed (up to 20 cm/s) provides great convenience for the user

Quick assembly system allows you to save up to 50% of the installation time

Possibility to control doors using the Homelink system

Soft start and soft stop will guarantee smooth operation

CE marking guarantees safety

A well-thought-out and reliable design allows you to use the drive for many years without servicing

Set LM 3800W

The top-mounted drive is perfect for doors with low clearance requirements. It is powered by 230V, it has soft start and stop as well as an anti-theft electric lock. The set includes a LED lamp and two remote controls.

BEDITOM is an experienced manufacturer of sectional doors for individual and industrial customers.

Our goal is to provide customers with products at the highest technological level. We recognize the needs of our customers and then convert them into innovative solutions, therefore ensuring the competitiveness of our products

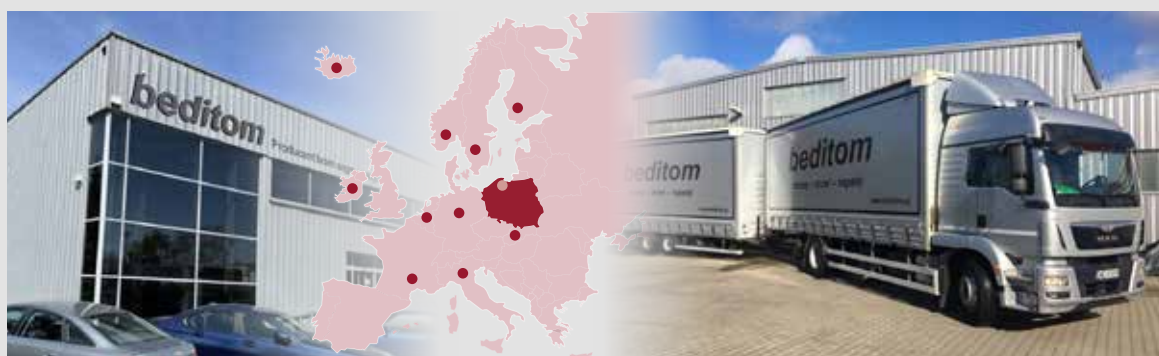

Customer satisfaction, comfort of use and safety are the highest priority for us. We offer customer support from the consulting stage, through execution, assembly, and service throughout the entire period of use.

We care about customers' safety. Our products meet the requirements of European standards and regulations.

In relationships with our clients and business partners, we follow high professional and ethical standards. The trust of our customers and partners is an expression of the highest appreciation for the efforts of our team.

We are passionate about the opportunities to improve products and customer service. We implement our goals with particular attention to environmental requirements, which is expressed by ensuring high durability products with optimal energy efficiency.
